

btexx html editor pro

A Professional HTML Editor for the SAP NetWeaver® Portal

Media designer:

"btexx html editor pro offers me all of the creative freedom I need from text formatting, to incorporating graphics to integrating links on portal pages."

Are you looking for a professional HTML editor for designing content in the SAP Portal?

btexx html editor pro: Convenient portal page design

btexx exclusively offers the HTML editor TinyMCE, well-known as open source software, for SAP NetWeaver®. This has been made possible by an exclusive partnership between btexx and the Swedish company Moxiecode Systems (Skellefteå/Schweden).

The WYSIWYG btexx html editor pro allows you to create attractive, large-scale webpages with little effort. It is completely integrated in the SAP NetWeaver Portal and offers extensive editing and formatting features which enable modern web content editors to work efficiently, even in an SAP portal environment.

The editor is simply integrated in existing XML forms and supports the central document storage system Knowledge Management (KM) within the SAP NetWeaver Portal to integrate images and other media, such as Flash. What's more, it also enables you to set links to other portal objects (e.g. links to portal pages or KM documents) directly from the body copy within the editor. You have a comprehensive set of possibilities for designing your content. All editorial tasks can be managed effortlessly. Even users' own stylesheets can be integrated using btexx html editor pro. This – and the ability to store ready-made templates – ensures that your corporate design will be applied throughout the SAP portal.

The btexx html editor pro offers a variety of features which simplify the creation of modern portal pages significantly. Editors can design attractive portal pages, even without knowledge of web programming languages. At the same time, the editor's scope of functionality is completely configurable.

btexx html editor pro:

- Simplest possible SAP portal page design
- Create and maintain HTML iViews
- Create links from body copy to portal pages

Right:

Configuration examples for
btexx html editor pro Basic,
Extended, Professional

To save you time and money in integrating the editor, we have already prepared three sample editor configurations for you, which can be integrated into your portal as forms and can be used immediately:

■ Basic form

The range of features can be reduced to just a few elements. The toolbar can be arranged flexibly.

■ Extended form

The extended form can also be used to present tables. Additionally, it enables users to insert special characters and links to portal content.

■ Professional form

There are no limits to your creativity with the professional form. You can use the Link Picker and Image Picker and even embed video files.
