

btexx portal utilities

Work quickly within the SAP NetWeaver® Portal

Technical Project Manager/Portal:

"The Add To My Homepage function in btexx portal utilities makes it easy for all users to personalize their own workspace."

Are you looking for useful functional enhancements for your SAP Portal-Projekt?

btexx portal utilities: Tools for every portal project within the SAP NetWeaver® Portal

The btexx portal utilities extension package lets you quickly enhance the SAP NetWeaver Portal to include new functionality. btexx portal utilities are completely integrated in the SAP NetWeaver Portal and offer numerous tools and portal applications that immediately help SAP Portal users to become more efficient in their complex working environments.

Add To My Homepage: Fill your own homepage with the click of a mouse!

The Add To My Homepage function in btexx portal utilities allows you to add a favorites symbol to any desired iView. Your portal users can use this symbol to apply iViews to their personal homepages with a simple mouse click! The implementation of the Add To My Homepage function is 100% based on the SAP NetWeaver Portal personalization technology.

From a technical perspective, the homepage is a single portal role that is assigned to all users and can be individually personalized by anyone. The technical implementation btexx has chosen lets you remain 100% within the SAP standard, while at the same time significantly increasing user comfort!

btexx portal utilities:

- Tools for every SAP Portal project
- Add To My Homepage
- Key Landing Page
- Link Picker

The **Add To My Homepage** function is represented by a star symbol

Figure: Add To My Homepage function

Key Landing Page: Always maintain a complete overview!

Are you familiar with this situation? You have spent a lot of time and effort working on your portal roles and now need to enter the default overview page for each individual item on the main menu and retroactively implement all of the changes here. Not with btexx portal utilities: The Key Landing Page is a full-page iView that automatically exports the menu structure for all of the subordinate levels and presents the menu items in a clear and appealing manner. The text and images for the Key Landing Page are saved and entered as attributes on the portal pages; this eliminates multiple entries and helps you maintain a constant overview!

Link Picker: Generate your links with the click of a button!

The SAP NetWeaver Portal is familiar with a number of targets: Portal pages, KM documents, PCD objects, external links, etc. Due to their complex syntax, using these links in XML forms is anything but simple and requires a great amount of time and effort. The Link Picker from btexx portal utilities provides relief; it offers a convenient dialog interface for selecting the desired target and allows the editor to choose the window in which the link should be opened. The link generated by btexx is then automatically transferred to the XML form and can be used instantly!
