

Accelerate your SAP Portal!

Performance-Tuning at a Fixed Price! 6.500,- € plus VAT

The challenge

The acceptance of your enterprise portal (employee portal, extranet, website, etc.) crucially depends on the response times of the presented content and the deployed applications. An inadequate performance of your portal solution affects the productivity of your employees. In the worst case the positive image of your platform can take irreversible damage.

Our services

btexx has developed a consulting package for SAP enterprise portals concerning performance issues. Based on the experience gained in over 200 portal projects, we can examine the existing infrastructure and develop a performance checklist that covers your needs. This checklist serves as a foundation of the assignment for the consultants on site.

Our consultant will analyze your infrastructure and develop recommendations for necessary adjustments on various system parameters. In addition, our consultant will check your framework implementation¹ or a custom selected Java implementation for potential performance problems.

Your benefits

With the analysis of your SAP portal regarding potential performance problems, you can create the preconditions for a carefully planned implementation to improve the performance issues identified within the scope of this offer.

This results in potential savings for you due to faster process cycle times, higher acceptance by your clients, partners and employees; and a platform using the existing infrastructure as best as possible.

SAP Special Expertise Partner:
SAP NetWeaver Application Server
SAP NetWeaver Process Integration
SAP Business Process Management
SAP NetWeaver IDM

¹ Only possible as an external facing implementation

Our Offer:

Accelerate your SAP portal
